An attacker after a move

Usage, playing time and luck after a move, Big-5, 2014–15 to 2024–25

Ben Rimmer
First-class BSc Economics, Exeter
benedict.p.rimmer@gmail.com

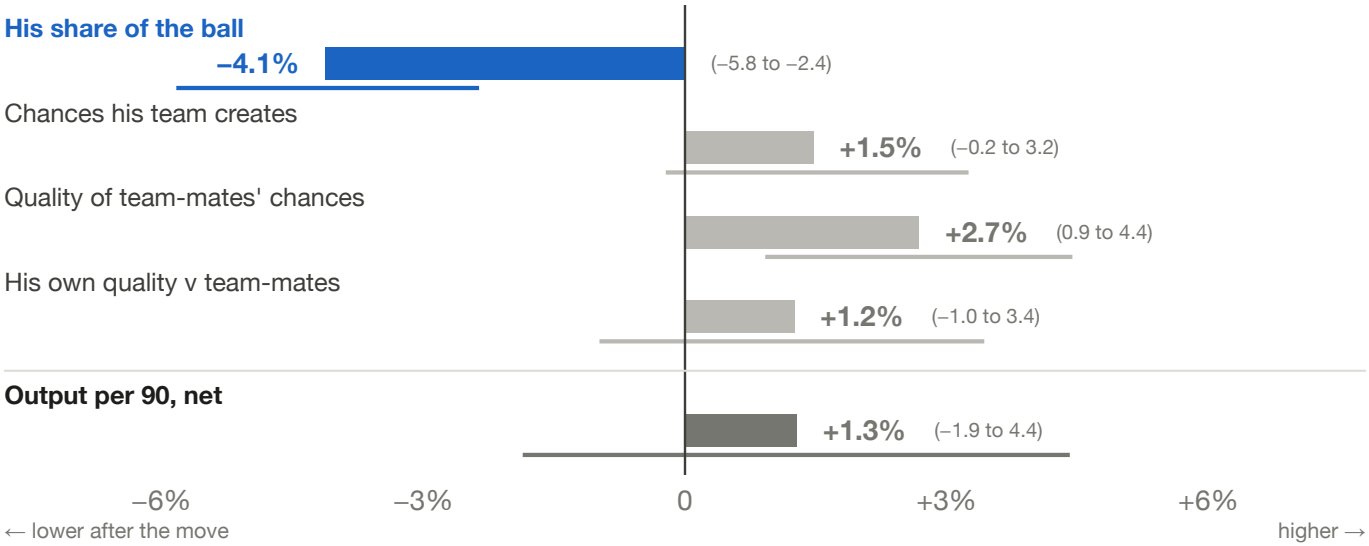
After a move between Big-5 clubs, 44% of attackers flop or fall below 900 league minutes the next season, against 33% of stayers (+11.7 points (+7.9 to +15.4) matched on last season), but where a fee was paid the gap is +1.8 (–3.8 to 7.4). If he keeps playing, his share of his team's shots and shot-assists changes by –4.1% (–5.8% to –2.4%), –2.4% in open play, and his output per 90 by +1.3%. Observational and exploratory.

+11.7 pts
flop or lost his place, movers v stayers, matched

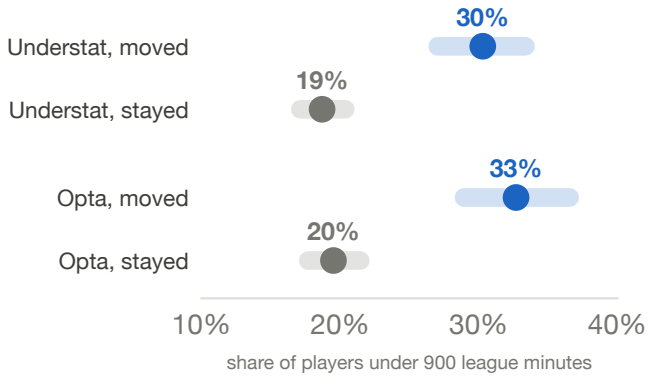
30% v 19%
under 900 league minutes next season, movers v stayers

–4.1%
share of shots and shot-assists, matched

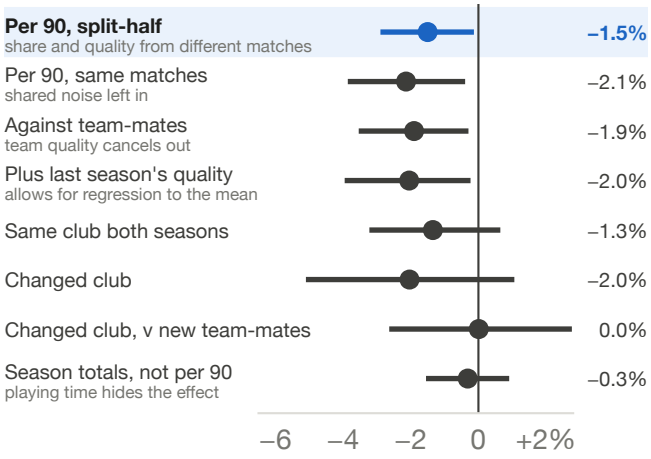
What a move does, against stayers with the same last season (per 90)



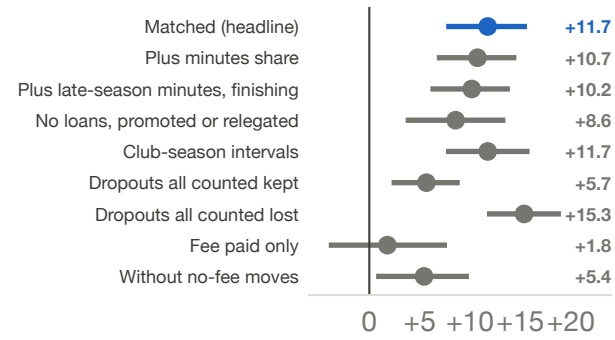
Below 900 league minutes the next season



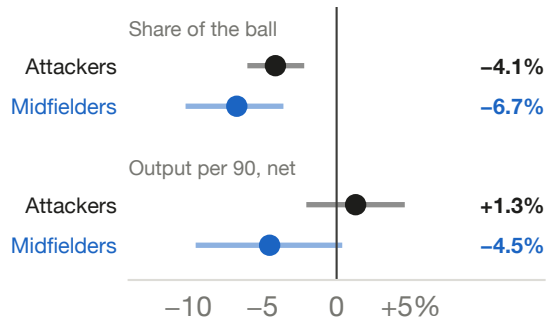
Same player, 5 points more of the ball



Flop or lost place under each check (points)



After a move: attackers v midfielders (matched)



Limits: observational and exploratory, nothing pre-registered; shots and shot-assists only; the four-part split is accounting; no betting, fantasy or prop market tested, so no trading signal. Big-5: top divisions of England, Spain, Italy, Germany, France.
Data: Understat, Opta via FBref, Transfermarkt. 95% intervals.
